Comput. Methods Appl. Mech. Engrg. 131 (1996) 367–370

Computer methods in applied mechanics and engineering

Subject Index of Volume 131

Asymptotic methods
Analysis of an eddy current problem involving a thin inductor, R. Touzani 233–240

Dynamics
Damping effects on the dynamic stability of a rod subjected to intermediate follower loads, H.P. Lee 147–157
Finite element dynamic modeling of a translating and rotating flexible link, B.O. Al-Bedoor and Y.A. Khulief 173–189
Direct and inverse dynamics of a very flexible beam, D. Rubinstein, N. Galili and A. Libai 241–261
Skateboard dynamics, Yu.G. Ispolov and B.A. Smolnikov 327–333

Elasticity
Enforcement of essential boundary conditions in meshless approximations using finite elements, Y. Krongauz and T. Belytschko 133–145

Electromagnetic fields
Analysis of an eddy current problem involving a thin inductor, R. Touzani 233–240

Electronics
Analysis of an eddy current problem involving a thin inductor, R. Touzani 233–240

Finite difference methods
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207
A higher-order Godunov scheme coupled with dynamic local grid refinement for flow in a porous medium, M.G. Edwards 287–308

Finite element and matrix methods
A numerical procedure for a non-linear elastic problem for incompressible material based on a perturbation method, A. Bajenitchev 31– 39
Long-term dissipativity of time-stepping algorithms for an abstract evolution equation with applications to the incompressible MHD and Navier–Stokes equations, F. Armero and J.C. Simo 41– 90
A local solution adapted Tri-Tree multigrid generator and iterative equation solver for mixed finite element formulation of the Navier–Stokes equation, S.Ø. Wille 109–132
Enforcement of essential boundary conditions in meshless approximations using finite elements, Y. Krongauz and T. Belytschko 133–145
Finite element dynamic modeling of a translating and rotating flexible link, B.O. Al-Bedoor and Y.A. Khulief 173–189
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207

A weak statement perturbation CFD algorithm with high-order phase accuracy for hyperbolic problems, S. Roy and A.J. Baker 209–232
Direct and inverse dynamics of a very flexible beam, D. Rubinstein, N. Galili and A. Libai 241–261
Geometric properties of 2D and 3D unilateral large slip contact operators, J.H. Heegaard and A. Curnier 263–286
Explicit residual-based a posteriori error estimation for finite element discretizations of the Helmholtz equation: Computation of the constant and new measures of error estimator quality, J.R. Stewart and T.J.R. Hughes 335–363

Fluid mechanics
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107
A local solution adapted Tri-Tree multigrid generator and iterative equation solver for mixed finite element formulation of the Navier–Stokes equation, S.Ø. Wille 109–132
Explicit residual-based a posteriori error estimation for finite element discretizations of the Helmholtz equation: Computation of the constant and new measures of error estimator quality, J.R. Stewart and T.J.R. Hughes 335–363

Gas dynamics
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107

General Rayleigh–Ritz and Galerkin techniques
A weak statement perturbation CFD algorithm with high-order phase accuracy for hyperbolic problems, S. Roy and A.J. Baker 209–232
Explicit residual-based a posteriori error estimation for finite element discretizations of the Helmholtz equation: Computation of the constant and new measures of error estimator quality, J.R. Stewart and T.J.R. Hughes 335–363

Heat and diffusion
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207

Nonconservative loads
Damping effects on the dynamic stability of a rod subjected to intermediate follower loads, H.P. Lee 147–157

Nonlinear dynamics of systems
Computation of Hopf branches bifurcating from a class of Hopf/steady-state points, B. Wu and T. Küpper 159–172

Nonlinear mechanics
Computational anisotropic plasticity for high-rate forming applications, P.J. Maudlin and S.K. Schiferl 1– 30
Direct and inverse dynamics of a very flexible beam, D. Rubinstein, N. Galili and A. Libai 241–261
Geometric properties of 2D and 3D unilateral large slip contact operators, J.H. Heegaard and A. Curnier 263–286

Numerical solution procedures
A numerical procedure for a non-linear elastic problem for incompressible material based on a perturbation method, A. Bajenitchev 31– 39
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107

Enforcement of essential boundary conditions in meshless approximations using finite elements, Y. Krongauz and T. Belytschko 133–145
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207
A weak statement perturbation CFD algorithm with high-order phase accuracy for hyperbolic problems, S. Roy and A.J. Baker 209–232
Geometric properties of 2D and 3D unilateral large slip contact operators, J.H. Heegaard and A. Curnier 263–286
A higher-order Godunov scheme coupled with dynamic local grid refinement for flow in a porous medium, M.G. Edwards 287–308
Explicit residual-based a posteriori error estimation for finite element discretizations of the Helmholtz equation: Computation of the constant and new measures of error estimator quality, J.R. Stewart and T.J.R. Hughes 335–363

Phase changes
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207

Plasticity
Computational anisotropic plasticity for high-rate forming applications, P.J. Maudlin and S.K. Schiferl 1– 30

Solution of differential equations
A local solution adapted Tri-Tree multigrid generator and iterative equation solver for mixed finite element formulation of the Navier–Stokes equation, S.Ø. Wille 109–132
Skateboard dynamics, Yu.G. Ispolov and B.A. Smolnikov 327–333

Solutions of ordinary and partial differential equations
A weak statement perturbation CFD algorithm with high-order phase accuracy for hyperbolic problems, S. Roy and A.J. Baker 209–232
Spline solutions of linear eighth-order boundary-value problems, S.S. Siddiqi and E.H. Twizell 309–325

Spline approximation
Spline solutions of linear eighth-order boundary-value problems, S.S. Siddiqi and E.H. Twizell 309–325

Structural mechanics
Computational anisotropic plasticity for high-rate forming applications, P.J. Maudlin and S.K. Schiferl 1– 30
Damping effects on the dynamic stability of a rod subjected to intermediate follower loads, H.P. Lee 147–157

Subsonic flow
Long-term dissipativity of time-stepping algorithms for an abstract evolution equation with applications to the incompressible MHD and Navier–Stokes equations, F. Armero and J.C. Simo 41– 90

Supersonic flow
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107

Systems of linear and nonlinear simultaneous equations
A local solution adapted Tri-Tree multigrid generator and iterative equation solver for mixed finite element formulation of the Navier–Stokes equation, S.Ø. Wille 109–132

A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207

Transport phenomena
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107
A finite volume method for solute segregation in directional solidification and comparison with a finite element method, C.W. Lan and F.C. Chen 191–207
A higher-order Godunov scheme coupled with dynamic local grid refinement for flow in a porous medium, M.G. Edwards 287–308

Viscous flow
Long-term dissipativity of time-stepping algorithms for an abstract evolution equation with applications to the incompressible MHD and Navier–Stokes equations, F. Armero and J.C. Simo 41– 90
A local solution adapted Tri-Tree multigrid generator and iterative equation solver for mixed finite element formulation of the Navier–Stokes equation, S.Ø. Wille 109–132

Wave motion
Semi-implicit donor cell differencing and the hyperbolic conservation laws having source terms, F. Ali and M.A. Kassar 91–107
